GRAPHIC COMMUNICATION 2

ASSIGNMENTS **ARCHITECTURE**

Title: Interpretation of Architectural Form
Description: Create a graphic interpretation of architecture in line and/or plane

Procedure:
• Photograph a building of your choice and in the architectural style of interest to you.
• Bringing the digital photo into Illustrator, trace key form characteristics in lines and or color planes.
• The idea here is to stylize the original form into a more analytical interpretation. Vary line thicknesses to produce a more dynamic linear representation.

Pursue abstraction. This is not an assignment requiring accurate tracing, rather you are to examine line. Now, consider adding color planes to complete the graphic interpretation.
• Work on an 11″ x 17″ page.
• Print the assignment on the Epson large format printer and prepare the print for insertion into the course portfolio.
